screenshots from Youtube Video.

Notes:

- It is possible to use different screens (new and older types) in a brightwall-setup for synchronised playback of different movies. If one of the displays does not work correctly, it could mean that the movie frame rate is not accepted by that display. Make sure you render out your movies in different frame rates for testing.
- If a smart network switch is used, make sure it is reset to the factory default settings so that al network ports are in the same range.
- Older or damaged network cables could disrupt the sync signal. Make use of undamaged or new CAT6 cables.
