

Connection issues

Tips for wired connection with Windows laptop:

Turn off WIFI connection

Turn off all firewalls!

Firewall can switch back on after change to ethernet connection, make sure its off.

Change IPv4 settings

IP assignment IPv4: Manual

IPv4 address: same range as Dome mac, change last number (like 192.168. 1.11 or 20 something)

IPv4 subnet prefix length: 16 or 24

IPv4 gateway: 192.168.1.10 (same as Dome mac)

In case you need to fill in subnet mask, make it the same as the Dome mac: 255.255.0.0

Check resolution match!

Lag in image transfer can be caused by resolution & frame rate miss match.

Source Resolution should be 4000 x 4000 (or try 2000 x 2000 if lag stays)

60 fps

Lag can also be caused by Syphon receiver. Turn off Syphon and access your NDI stream directly through Blendydome > Source > NDI > choose source..
